

Homework 01

Question 1: (50 points)

Consider that you will soon be designing a database for a Hospital Management System. Based on the knowledge that we have learned so far, identify at least 4 different types of entities about which a Hospital Management Systems needs to store data.

Based on what you have identified, include the corresponding attributes that can be useful. Show these through tables with data that shows state of these tables. Give appropriate table names. Underline the unique key in all your tables.

Question 2: (50 points)

Based on the tables developed in Question 1, determine the data type for all columns identified. You need to provide column name and data type as shown below.

Name	Type	Length	Description
