

Homework 5: Advanced SQL

Assigned on: Feb 12

Due on: Feb 19

For this assignment the starter codes are available on “Module 6 SQL Adv.zip” folder present with the assignment.

Exercise 1: Creating View

- For this exercise, create a view called V_CIS_MAJORS based upon the following SQL SELECT statement:

```
SELECT * FROM students WHERE major = 'CIS';
```

- Query the view and show the output.
- Create another view called V_COURSES_TAKEN based upon the following SQL SELECT statement:

```
SELECT name, major, coursenum, coursename, semester, year, grade  
FROM students, courses  
WHERE students.studentid = courses.studentid;
```

- Query the V_COURSES_TAKEN view and show the output.

Exercise 2: More JOIN Queries with COMPANY database

- Use COMPANY database. You can re-create COMPANY database using cr_company.sql
 - List all of the employees working in Houston
 - List each employee name and the location they work in. List them in order of location and name
 - What is the highest paid salary in Houston?
 - In which states do employees live?
 - List the Department name and the total salaries for each department

Submission

Exercise 1

- Create SQL script for each SQL to create a view with the file name including proper number. For example, view1.sql, and view2.sql

Exercise 2

- Create queries for JOIN with the file name including proper number. For example, 1.sql, 2.sql, 3.sql ...
- Create a zip file, Homework6[your Name].sql
- Then, submit it on Canvas
